

Web Application Development – Assignment3

YouTube Player API Reference for iframe Embeds.

- You may work solo or in pairs. I accept only one submission per group and require all team members' names appear atop `assignment3.js`.
- Rendering may vary among browsers even for the same web page. I will only test your work from **Chrome**. You will not get full credit if it doesn't work in Chrome (even if it works in other browsers).

Submission

- Upload only **ONE** file to BlackBoard: `assignment3.js`
- Do not modify `assignment3.html`

Demo

- We discussed the demo in class. Check `assignment3Demo.mov` for reference.

Preparation

1. Visit this link and understand the code inside:
https://developers.google.com/youtube/iframe_api_reference
Read this page thoroughly! Once you understand this page, you should be able to finish this assignment.
2. Note that video should not start automatically. Autoplay is only allowed when approved by the user. Otherwise, media is muted (This restriction is done by browsers). Once you activate the video, the video will start.
3. Check this link for viewport.
<http://stackoverflow.com/questions/123999/how-to-tell-if-a-dom-element-is-visible-in-the-current-viewport>
<https://www.geeksforgeeks.org/javascript/how-to-check-a-dom-element-is-visible-in-current-viewport/>

Test

As we discussed in class. It may not work if you just open the file from the browser ([file:///...](#))

It also may not work if you run “preview” from VS Code.

Run VS Code localhost via Chrome (copy & paste the link from your VS Code Preview). For example, <http://127.0.0.1:3000/Assignment3/assignment3.html?vscod-livepreview=true>

Implementation (10 points): Play the video only if the video is in the viewport.
This part should be done only with your partner.
